## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. Claims 16-30 are allowed.
2. The following is an examiner's statement of reasons for allowance: The prior art does not disclose or suggest a pressure sensor having a clamping ring having a first engagement means and a stiff decoupling element arranged between the clamping ring and a support ring, and the dimensions of said support ring and said decoupling element are coordinated with the dimensions of said sealing ring and said pressure measurement cell such that a radial deformation of the membrane-bearing end face caused by axial clamping of said pressure measurement cell is so small, that the span error of said pressure sensor on the basis of a reduction of the axial clamping force by at least 10% amounts to not more than about 0.02% and the temperature hysteresis of the span amounts to not more than about 0.03%.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
